

# TECHNICAL SHEET

## LEAF GRID

### DESCRIPTION

The Vaillancourt Leaf grid is made of a metal sheet with linear drainage holes to eliminate leaf buildup in the gutters. The leaf grid is made to measure to fit Vaillancourt European gutters and Super-7 gutters.

The drainage holes are perforated in two sets of four rows by an industrial punch press which pushes the metal sheet to form a downward slope, creating effective drainage holes.

The grid color matches the color of the metal roof and / or selected gutters.

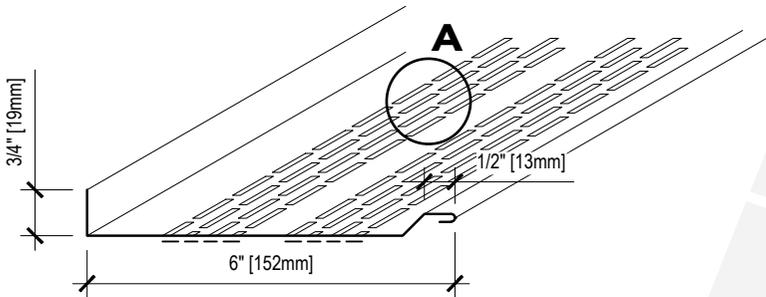

Length: 3048 mm (10'-0 in)

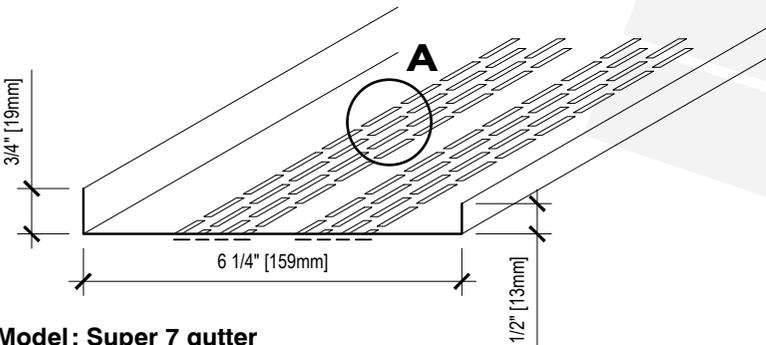

### MATERIALS

Leaf grids are made from the same material as the roof or gutter :

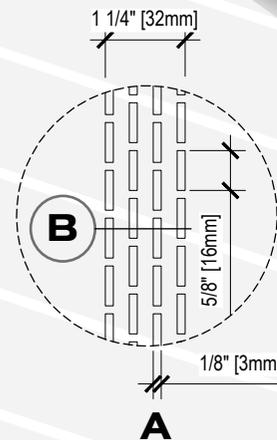

- ◆ galvanized, Galvalume® or prepainted steel : 22 and 24 gauge
- ◆ copper : 16 oz or 20 oz

**Model : European gutter**

**Model : Super 7 gutter**

**Details : drainage holes**
